Product Specification

41.26Gb/s LR4 QSFP+ 1310nm 10km Optical Transceiver

P/N: 40G-QSFP-LR4

Features

- Hot Pluggable QSFP+ form factor
- Supports 41.2Gb/s aggregate bit rate
- LC duplex connector
- Max power dissipation <2.5W
- Up to 10km transmission on single mode fiber (SMF)
- Maximum link length of 10km
- 4 CWDM lanes MUX/DEMUX design
- PIN receivers
- Built-in digital diagnostic function
- Commercial temperature range 0°C to 70°C

Compliance

- QSFP+ MSA
- Compliant with QSFP Electrical MSA SFF-8636
- Compliant with QSFP Mechanical MSA SFF-8665
- IEEE 802.3bm
- RoHS

Applications

- Switches with QSFP+ ports
- Router with QSFP+ Ports
- Server or Network Adapter Card
- Optical Transmission System
- Other devices with QSFP+ Ports

Description

The 40G-QSFP-LR4 is a high-performance transceiver module designed for long-range optical communication applications, supporting transmission distances of up to 10 kilometers. It complies with the IEEE P802.3ba 40GBASE-LR4 standard, ensuring reliable and efficient data transmission. The module converts four input channels of 10Gb/s electrical data into four CWDM optical signals, which are then multiplexed into a single channel for 40Gb/s optical transmission. On the receiver side, it de-multiplexes a 40Gb/s optical input into four CWDM channels and converts them back into four channels of electrical data.

The four CWDM channels operate at central wavelengths of 1271 nm, 1291 nm, 1311 nm, and 1331 nm, adhering to the CWDM wavelength grid defined in ITU-T G.694.2. The module features a duplex LC connector for the optical interface and a 148-pin connector for the electrical interface. To minimize optical dispersion in long-haul systems, single-mode fiber (SMF) is required for optimal performance. Designed in accordance with the QSFP+ Multi-Source Agreement (MSA), the module includes a digital diagnostic interface for real-time monitoring and is built to withstand harsh external operating conditions, including extreme temperatures, humidity, and EMI interference. This makes the 40G-QSFP-LR4 an ideal solution for high-speed, long-distance data communication in demanding environments such as data centers and telecommunications networks.

Product performance Specifications

| | | | | |

Note1: GND is the symbol for signal and supply (power) common for the QSFP+ module. All are common within the QSFP+ module and all module voltages are referenced to this potential unless otherwise noted. Connect these directly to the host board signal-common ground plane.

Note2: Vcc Rx, Vcc1 and Vcc Tx are the receiver and transmitter power supplies and shall be applied concurrently. Requirements defined for the host side of the Host Edge Card Connector are listed in Table. Recommended host board power supply filtering is shown in Host board power supply circuit. Vcc Rx Vcc1 and Vcc Tx may be internally connected within the QSFP module in any combination. The connector pins are each rated for a maximum current of 500 mA.

Note3: High-speed signal interfaces require differential pairs (e.g. TX1+/TX1-) with tightly matched impedances (typically 100Ω).

Note4: The management and control signals are based on LVTTL level logic and are used for functions such as module selection and reset.

Mechanical Dimension

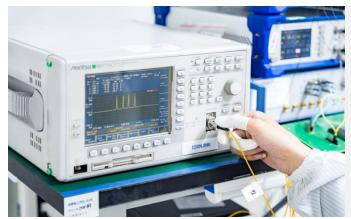

Test Center

1. Performance Testing

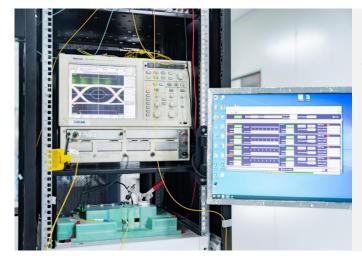

Every fiber optic transceiver is thoroughly tested by the LSOLINK Assurance Program, which is equipped with the world's most advanced analytical equipment to ensure that our transceivers meet the industry's international public protocol standards while still functioning flawlessly in your facility.

Optical Spectrum Inspection

Using the industry's leading optical spectrum analyser to check in real time that the parameters of the optical transceiver's laser comply with industry standards.

- > Peak: Peak wavelength and peak level
- > 2nd Peak: Side-mode wavelength and level
- Mean WI: Center wavelength
- > Total Power: Total power of spectrum
- SMSR: Side-Mode Suppression Ratio

Optical Signal Quality Inspection

Using highly efficient sampling oscilloscopes and BERT testers, equipped with an automated test platform to accurately test the signal quality of the transceiver, test records are kept for up to 5 years to ensure the traceability of each transceiver.

- Eye Mask Margin(NRZ)
- > TDECQ(PAM4):transmitter dispersion eye closure
- > OMA: Optical modulation amplitude
- BER: Bit error rate
- ER: Extinction Ratio

Flow Pressure Test

Using multi-protocol network traffic analyser with various brands of switches to test the transceiver's ability to transmit at full speed.

- **Bandwidth:** Actual transceiver bandwidth on the port
- Packet Loss
- Packet Errors:CRC Errors/PCS Errors/Symbol Errors
- LinkDown Counts
- > latency

Aboveis part of our test bed network equipment. For more information, Please click <u>download</u> for optical transceiver performance test report.

2. Quality Control

We adopt advanced quality management solutions. Each transceiver is self-inspected, including:20x microscope inspection, 200x microscope inspection, and QC process inspection.

visual inspection

Microscopic inspection: 20X

Microscopic inspection: 200X

Reliability Verification

Optical endface inspection

OQC Inspection

3. Compatibility Testing

Each optical transceiver is tested in LSOLINK's library of compatibility test equipment to ensure perfect compatibility with multiple brands on the market.

Aboveis part of our test bed network equipment. For more information, Please click <u>download</u> to get the compatibility test report of each brand of optical transceiver.
