

Product Specification

850Gb/s 2xFR4 OSFP 1310nm 2km
Optical Transceiver

P/N: NDR-OSFP-2FR4

Features

- Hot Pluggable OSFP form factor
- Operating data rate 850Gbps
- Single +3.6V power supply
- Dual Duplex LC connector
- Max power dissipation <16.5W
- Up to 2km transmission on single mode fiber
- PIN receivers
- Built-in digital diagnostic function
- Commercial temperature range 0°C to 70°C

Compliance

- Compliant with OSFP MSA
- Compliant with CMIS 5.1
- RoHS

Applications

- Supports 800Gb InfiniBand NDR Systems
- Cloud Services
- Data Center Interconnect
- Data center Enterprise networking
- Switches with OSFP ports

Description

The NDR-OSFP-2FR4 is a state-of-the-art optical transceiver module engineered for high-performance networking. With an OSFP form factor, it is specifically tailored for Infiniband NDR 2x400G applications, making it a prime choice for data centers and high-end computing environments. Leveraging the FR4 module technology, it offers a 4x106.25 Gbps (53.125 GBd PAM4) electrical and optical interface, enabling rapid and reliable data transfer.

A standout feature of the NDR-OSFP-2FR4 is its remarkable transmission distance of up to 2 km over single-mode fiber, providing extended reach for long-haul connectivity. It complies with industry standards, ensuring seamless compatibility with existing network infrastructure. Additionally, its energy-efficient design helps cut down on operational costs. This module is equipped with 2xDuplex LC interfaces. Overall, it is a scalable and future-proof solution for high-speed data communication requirements.

Note1: Average launch power, each lane (min) is informative and not the principal indicator of signal strength.

Note2: Even if TDECQ < 1.4dB, OMA_{outer} (min) must exceed this value.

Note3: Transmitter reflectance is defined looking into the transmitter.

Note4: Receiver sensitivity (OMA_{outer}), each lane (max) is informative and is defined for a transmitter with SECQ of 0.9 dB.

Note5: Measured with conformance test signal at TP3 for the BER = 2.4x10⁻⁴

Test Center

1. Performance Testing

Every fiber optic transceiver is thoroughly tested by the LSOLINK Assurance Program, which is equipped with the world's most advanced analytical equipment to ensure that our transceivers meet the industry's international public protocol standards while still functioning flawlessly in your facility.

Optical Spectrum Inspection

Using the industry's leading optical spectrum analyser to check in real time that the parameters of the optical transceiver's laser comply with industry standards.

- **Peak:** Peak wavelength and peak level
- **2nd Peak:** Side-mode wavelength and level
- **Mean Wl:** Center wavelength
- **Total Power:** Total power of spectrum
- **SMSR:** Side-Mode Suppression Ratio

Optical Signal Quality Inspection

Using highly efficient sampling oscilloscopes and BERT testers, equipped with an automated test platform to accurately test the signal quality of the transceiver, test records are kept for up to 5 years to ensure the traceability of each transceiver.

- **Eye Mask Margin(NRZ)**
- **TDECQ(PAM4):**transmitter dispersion eye closure
- **OMA:** Optical modulation amplitude
- **BER:** Bit error rate
- **ER:** Extinction Ratio

Flow Pressure Test

Using multi-protocol network traffic analyser with various brands of switches to test the transceiver's ability to transmit at full speed.

- **Bandwidth:** Actual transceiver bandwidth on the port
- **Packet Loss**
- **Packet Errors:**CRC Errors/PCS Errors/Symbol Errors
- **LinkDown Counts**
- **latency**
