

Product Specification

425Gb/s DR4 OSFP 1310nm 100m
Optical Transceiver

P/N: NDR-OSFP-DR4

Features

- Hot Pluggable OSFP form factor
- Operating data rate 425Gbps
- Single +3.3V power supply
- Dual MPO-12 APC connector
- Max power dissipation <10W
- Up to 106.25Gbps Data Rate Per Channel by PAM4 Modulation
- Maximum link length of 100m on OM4
- 1310nm VCSEL laser
- PIN receivers
- Built-in digital diagnostic function
- Commercial temperature range 0°C to 70°C

Compliance

- Compliant with OSFP MSA
- Compliant with CMIS 5.1
- RoHS

Applications

- Supports 400Gb InfiniBand NDR Systems
- Cloud Services
- Data Center Interconnect
- Data center Enterprise networking
- Switches with OSFP ports

Description

The NDR-OSFP-DR4 is a high-performance 400Gb/s single-port optical transceiver designed for InfiniBand NDR systems. It utilizes a single, 4-channel MPO-12/APC optical connector and employs 100G-PAM4 modulation, offering exceptional data transmission speed and reliability. This DR4 design supports a maximum reach of up to 100meters over OS2 single-mode fiber, ensuring efficient long-distance connectivity.

Built to meet the rigorous demands of modern data centers, the NDR-OSFP-DR4 is an ideal solution for high-bandwidth applications in supercomputing environments. It facilitates seamless integration into both computing and storage infrastructure, providing reliable, high-speed interconnectivity between devices.

Optimized for use with ConnectX-7/OSFP adapters and Twin-port transceivers in 2x400G InfiniBand switches, the NDR-OSFP-DR4 is qualified for end-to-end InfiniBand NDR systems, enabling superior performance and scalability for next-generation networking applications.

Note1: FEC is provided by host system.

Note2: Average launch power, each lane (min) is informative and not the principal indicator of signal strength. A transmitter with launch power below this value cannot be compliant; however, a value above this does not ensure compliance.

Note3: Even if the TDECQ < 1.4dB for an extinction ratio of ≥ 5 dB or TDECQ < 1.1dB for an extinction ratio of < 5dB, the OMAOuter (min) must exceed the minimum value specified here.

Note4: Ceq is a coefficient defined in IEEE Std 802.3-2018 clause 121.8.5.3 which accounts for reference equalizer noise enhancement

Note5: With the exception to IEEE 802.3bs 120E.3.1.2 that the pattern is PRBS31Q or scrambled idle.

Note6: Meets BER specified in IEEE 802.3bs 120E.1.1.

Note7: DC common mode voltage generated by the host. Specification includes effects of ground offset voltage.

Note8: Average receive power, each lane (min) is informative and not the principal indicator of signal strength. A received power below this value cannot be compliant; however, a value above this does not ensure compliance.

Note9: The receiver shall be able to tolerate, without damage, continuous exposure to a modulated optical input signal having this power level on one lane. The receiver does not have to operate correctly at this input power

Note10: Receiver sensitivity (OMA_{outer}), each lane (max) is informative and is defined for a transmitter with a value of SECQ up to 3.4 dB. It should meet Equation (1), which is illustrated in Figure 1.

Note11: Measured with conformance test signal at TP3 for the BER equal to $2.4E-4$.

Note12: These test conditions are for measuring stressed receiver sensitivity. They are not characteristics of the receiver.

Test Center

1. Performance Testing

Every fiber optic transceiver is thoroughly tested by the LSOLINK Assurance Program, which is equipped with the world's most advanced analytical equipment to ensure that our transceivers meet the industry's international public protocol standards while still functioning flawlessly in your facility.

Optical Spectrum Inspection

Using the industry's leading optical spectrum analyser to check in real time that the parameters of the optical transceiver's laser comply with industry standards.

- **Peak:** Peak wavelength and peak level
- **2nd Peak:** Side-mode wavelength and level
- **Mean Wl:** Center wavelength
- **Total Power:** Total power of spectrum
- **SMSR:** Side-Mode Suppression Ratio

Optical Signal Quality Inspection

Using highly efficient sampling oscilloscopes and BERT testers, equipped with an automated test platform to accurately test the signal quality of the transceiver, test records are kept for up to 5 years to ensure the traceability of each transceiver.

- **Eye Mask Margin(NRZ)**
- **TDECQ(PAM4):**transmitter dispersion eye closure
- **OMA:** Optical modulation amplitude
- **BER:** Bit error rate
- **ER:** Extinction Ratio

Flow Pressure Test

Using multi-protocol network traffic analyser with various brands of switches to test the transceiver's ability to transmit at full speed.

- **Bandwidth:** Actual transceiver bandwidth on the port
- **Packet Loss**
- **Packet Errors:**CRC Errors/PCS Errors/Symbol Errors
- **LinkDown Counts**
- **latency**
