Product Specification

103.125Gb/s ER QSFP28 1310nm 40km Optical Transceiver

P/N: 100G-Q28-ER

Features

- Hot Pluggable QSFP28 form factor
- Operating data rate 103.125Gbps
- Lane bit rate 25.78 Gb/s
- Single +3.3V power supply
- Duplex LC UPC connector
- Max power dissipation <4.5W
- 4 channel 850nm VCSEL laser
- 4 channel PIN receivers
- Built-in digital diagnostic function
- Commercial temperature range 0°C to 70°C

Compliance

- QSFP28 MSA
- Compliant with QSFP Electrical MSA SFF-8636
- Compliant with QSFP Mechanical MSA SFF-8665
- IEEE 802.3bm
- RoHS

Applications

- Switches with QSFP28 ports
- Router with QSFP28 Ports
- Server or Network Adapter Card
- Optical Transmission System
- Other devices with QSFP28 Ports

Description

The 100G-Q28-ER is a high-performance optical transceiver module designed to deliver 100G Ethernet connectivity over single-mode fiber (SMF) with a transmission distance of up to 40km. Utilizing a 1310nm wavelength and duplex LC connectors, this hot-swappable, industry-standard QSFP28 form factor module ensures seamless integration into existing network infrastructures. It supports data center interconnects and high-bandwidth applications, offering plug-and-play simplicity and compliance with the QSFP28 Multi-Source Agreement (MSA) specifications.

Equipped with an advanced Broadcom chipset, the module efficiently converts 4x25G NRZ electrical inputs into a single 100G PAM4 optical signal, optimizing signal integrity for long-haul transmission. Integrated digital diagnostics monitoring (DDM) via the I2C interface provides real-time access to critical parameters such as temperature, voltage, and optical power, enabling proactive network management. Its energy-efficient design and low power consumption make it ideal for high-density deployments in demanding environments.

The 100G-Q28-ER is engineered for reliability in data centers, enterprise networks, and telecommunications infrastructures requiring robust 100G connectivity. Its extended 40km reach supports metro networks, campus backbones, and cloud service provider links. With compliance to IEEE 802.3 standards and interoperability across multi-vendor ecosystems, this transceiver delivers future-proof scalability while reducing operational complexity and total cost of ownership.

Product performance Specifications

1. Basic Product Characteristics

38		GND	Ground	1

Note1: GND is the symbol for signal and supply (power) common for the QSFP+ module. All are common within the QSFP+ module and all module voltages are referenced to this potential unless otherwise noted. Connect these directly to the host board signal-common ground plane.

Note2: Vcc Rx, Vcc1 and Vcc Tx are the receiver and transmitter power supplies and shall be applied concurrently. Requirements defined for the host side of the Host Edge Card Connector are listed in Table. Recommended host board power supply filtering is shown in Host board power supply circuit. Vcc Rx Vcc1 and Vcc Tx may be internally connected within the QSFP module in any combination. The connector pins are each rated for a maximum current of 500 mA.

Note3: High-speed signal interfaces require differential pairs (e.g. TX1+/TX1-) with tightly matched impedances (typically 100Ω).

Note4: The management and control signals are based on LVTTL level logic and are used for functions such as module selection and reset.

Mechanical Dimension

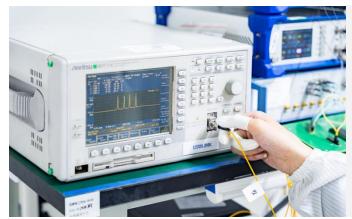

Test Center

1. Performance Testing

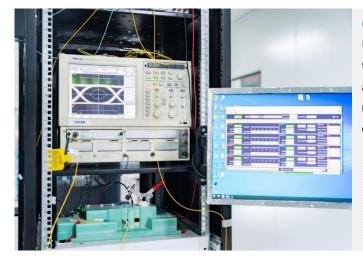

Every fiber optic transceiver is thoroughly tested by the LSOLINK Assurance Program, which is equipped with the world's most advanced analytical equipment to ensure that our transceivers meet the industry's international public protocol standards while still functioning flawlessly in your facility.

Optical Spectrum Inspection

Using the industry's leading optical spectrum analyser to check in real time that the parameters of the optical transceiver's laser comply with industry standards.

- Peak: Peak wavelength and peak level
- 2nd Peak: Side-mode wavelength and level
- Mean WI: Center wavelength
- Total Power: Total power of spectrum
- SMSR: Side-Mode Suppression Ratio

Optical Signal Quality Inspection

Using highly efficient sampling oscilloscopes and BERT testers, equipped with an automated test platform to accurately test the signal quality of the transceiver, test records are kept for up to 5 years to ensure the traceability of each transceiver.

- Eye Mask Margin(NRZ)
- > TDECQ(PAM4):transmitter dispersion eye closure
- OMA: Optical modulation amplitude
- BER: Bit error rate
- ER: Extinction Ratio

Flow Pressure Test

Using multi-protocol network traffic analyser with various brands of switches to test the transceiver's ability to transmit at full speed.

- **Bandwidth:** Actual transceiver bandwidth on the port
- Packet Loss
- Packet Errors:CRC Errors/PCS Errors/Symbol Errors
- LinkDown Counts
- > latency

Aboveis part of our test bed network equipment. For more information, Please click <u>download</u> for optical transceiver performance test report.

2. Quality Control

We adopt advanced quality management solutions. Each transceiver is self-inspected, including:20x microscope inspection, 200x microscope inspection, and QC process inspection.

visual inspection

Microscopic inspection: 20X

Microscopic inspection: 200X

Reliability Verification

Optical endface inspection

OQC Inspection

3. Compatibility Testing

Each optical transceiver is tested in LSOLINK's library of compatibility test equipment to ensure perfect compatibility with multiple brands on the market.

Aboveis part of our test bed network equipment. For more information, Please click <u>download</u> to get the compatibility test report of each brand of optical transceiver.
