Description

The 10G-SFP-U23-40 is a high-performance BiDi (Bidirectional) SFP+ transceiver module, designed for efficient data transmission over a single strand of fiber. This module utilizes two distinct wavelengths for transmit and receive: it transmits at 1270nm and receives at 1330nm, providing a cost-effective solution for long-distance optical communication with a single fiber connection.

The 10G-SFP-U23-40 is compliant with the SFF-8472 standard, offering digital diagnostics via the I2C interface to monitor real-time operating parameters. This ensures optimized performance and easy troubleshooting in complex networking environments.

This BiDi SFP+ module is extensively tested for compatibility with a wide range of networking equipment such as switches, routers, servers, and network interface cards (NICs). With low power consumption, high-speed performance, and reliable functionality, it is ideally suited for applications in enterprise wiring closets, service provider transport networks, and Radio & Baseband Units (RBU).
