Product Specification

212.5Gb/s QSFP56 Passive Direct Attach Copper Cable

P/N: HDR-Q56-CU

Features

- Hot Pluggable QSFP28 form factor
- Wire AWG:30AWG,28AWG,26AWG
- Available length range 0.5m~7m
- Operating data rate 212.5Gbps
- Power supply：+3.3V
- Max power dissipation <0.1W
- 4-Channel Full-Duplex Passive Copper Cable
- Commercial temperature range 0°C to 70°C
- Supports Device Programming by MCU with I2C

Compliance

- QSFP28 MSA
- Compliant with QSFP Electrical MSA SFF-8636
- IEEE 802.3bj
- RoHS

Applications

- Supports 200Gb InfiniBand HDR Systems
- Fiber Channel over Ethernet
- Switches, servers,routers and HBA
- Data center cabling infrastructure
- High density connections between networking equipment

Description

The HDR-Q56-CU is a remarkable solution in the realm of high-speed data transmission. Featuring the QSFP56 form factor, it is tailored precisely for Infiniband HDR 200G applications. This makes it an ideal choice for data centers, high-performance computing systems, and other environments that demand ultra-fast and reliable data transfer. As a passive direct-attach copper cable, it offers a cost-effective and straightforward way to achieve high-speed connectivity.

One of the key advantages of the HDR-Q56-CU is its ability to support the Infiniband HDR 200G rate, ensuring seamless and efficient data flow. It is designed to meet the strict requirements of modern networking, providing low latency and high bandwidth. The QSFP56 package ensures easy integration into existing systems. With its simple yet reliable design, this cable offers a practical and effective solution for high-speed data communication needs, enabling smooth operation in high-demand networking scenarios.

Note1: GND is the symbol for signal and supply (power) common for the QSFP+ module. All are common within the QSFP+ module and all module voltages are referenced to this potential unless otherwise noted. Connect these directly to the host board signal-common ground plane.

Note2: Vcc Rx, Vcc1 and Vcc Tx are the receiver and transmitter power supplies and shall be applied concurrently. Requirements defined for the host side of the Host Edge Card Connector are listed in Table. Recommended host board power supply filtering is shown in Host board power supply circuit. Vcc Rx Vcc1 and Vcc Tx may be internally connected within the QSFP module in any combination. The connector pins are each rated for a maximum current of 500 mA.

Note3: High-speed signal interfaces require differential pairs (e.g. TX1+/TX1-) with tightly matched impedances (typically 100Ω).

Note4: The management and control signals are based on LVTTL level logic and are used for functions such as module selection and reset.

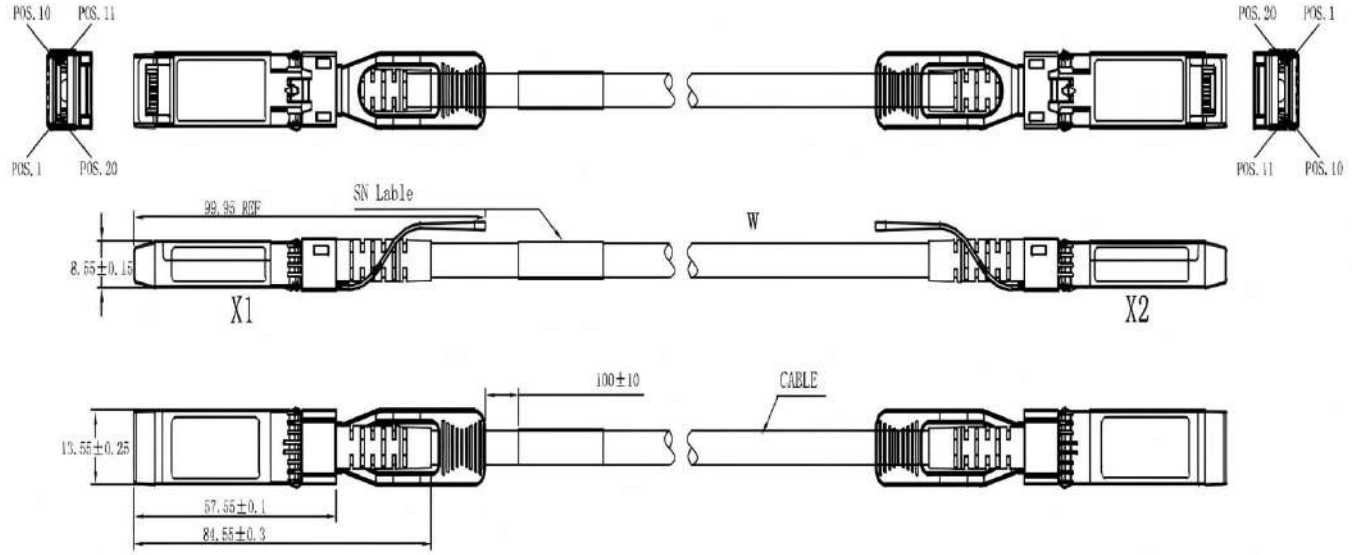
Mechanical Dimension



Note:

- Unit: mm
- Tolerance: φ0.1mm if not shown
- Latch color: black
- When L≤2m, the tolerance is ±25mm, when L>2m, the tolerance is ±1%

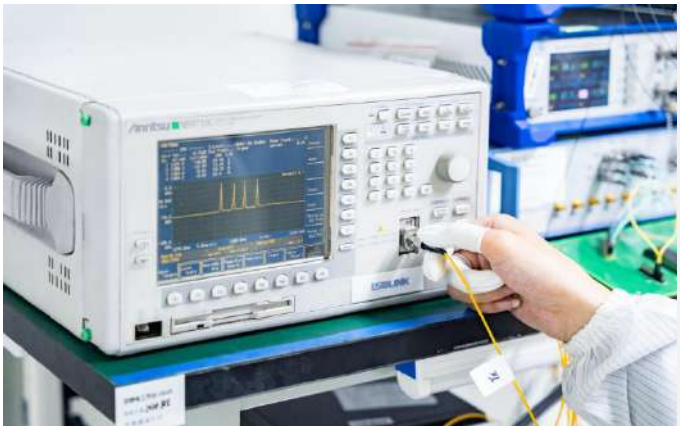
Waring:

- The transceiver optics is supplied with a dust cover. This plug protects the transceiver optics during standard manufacturing processes by preventing contamination from air borne particles.It is recommended that the dust cover remain in the transceiver whenever an optical fiber connector is not inserted.
- Handling Precautions: This device is susceptible to damage as a result of electrostatic discharge (ESD). A static free environment is highly recommended. Follow guidelines according to proper ESD procedures.
- Laser Safety: Radiation emitted by laser devices can be dangerous to human eyes. Avoid eye exposure to direct or indirect radiation.

Test Center

1. Performance Testing

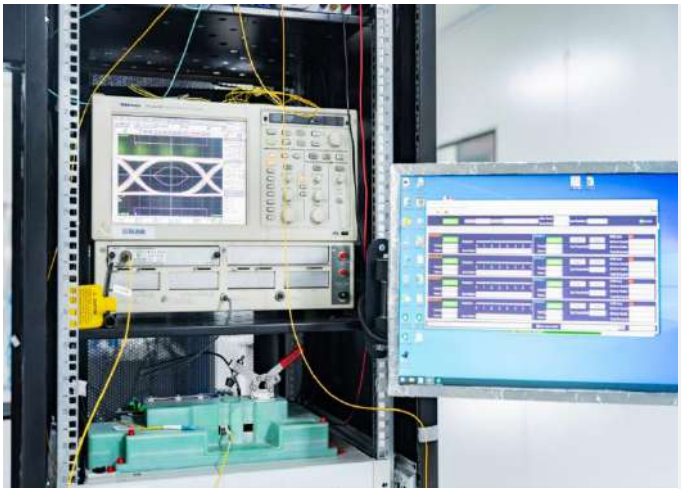
Every fiber optic transceiver is thoroughly tested by the LSOLINK Assurance Program, which is equipped with the world's most advanced analytical equipment to ensure that our transceivers meet the industry's international public protocol standards while still functioning flawlessly in your facility.



Optical Spectrum Inspection

Using the industry's leading optical spectrum analyser to check in real time that the parameters of the optical transceiver's laser comply with industry standards.

- **Peak:** Peak wavelength and peak level
- **2nd Peak:** Side-mode wavelength and level
- **Mean WI:** Center wavelength
- **Total Power:** Total power of spectrum
- **SMSR:** Side-Mode Suppression Ratio



Optical Signal Quality Inspection

Using highly efficient sampling oscilloscopes and BERT testers, equipped with an automated test platform to accurately test the signal quality of the transceiver, test records are kept for up to 5 years to ensure the traceability of each transceiver.

- **Eye Mask Margin(NRZ)**
- **TDECQ(PAM4):**transmitter dispersion eye closure
- **OMA:** Optical modulation amplitude
- **BER:** Bit error rate
- **ER:** Extinction Ratio

Flow Pressure Test

Using multi-protocol network traffic analyser with various brands of switches to test the transceiver's ability to transmit at full speed.

- **Bandwidth:** Actual transceiver bandwidth on the port
- **Packet Loss**
- **Packet Errors:**CRC Errors/PCS Errors/Symbol Errors
- **LinkDown Counts**
- **latency**
