

Features

- Supporting 800Gbps to 4x200Gbps
- Wire AWG:30AWG,28AWG,26AWG
- Available length range 3m~5m
- Data rates per channel 106.25Gbps
- Operating data rate 850Gbps
- Power supply: +3.3V
- Max power dissipation <1.5W
- Commercial temperature range 0°C to 70°C

Compliance

- Compliant with OSFP MSA and QSFP112 MSA
- Compliant with CMIS 5.1
- IEEE 802.3db
- RoHS

Applications

- Supports InfiniBand NDR/HDR Systems
- High Performance Computing (HPC)
- Data Center & Networking Equipment

Description

The NDR-OSFP-4Q-AC is a active breakout copper cable designed to facilitate InfiniBand NDR 800Gbps data transmission. It features an OSFP connector on one end and four QSFP112 connectors on the other, each supporting HDR 200Gbps. This configuration enables the efficient division of a single 800Gbps link into four 200Gbps connections, optimizing bandwidth utilization in data centers and high-performance computing environments. The cable supports transmission distances ranging from 3 to 5 meters, making it suitable for short-reach applications.

Ideal for connecting NVIDIA Quantum-2 InfiniBand switches and ConnectX-7 adapters, the NDR-OSFP-4Q-AC cable ensures seamless data flow with minimal latency. Its robust construction and compliance with industry standards make it suitable for dense network configurations, supporting the demanding requirements of artificial intelligence, scientific research, and large-scale cloud data centers.

Product performance Specifications

1. Basic Product Characteristics

Parameter	Symbol	Min	Тур.	Max	Unit
Storage Temperature	Ts	-40	-	+85	°C

Note1: GND is the symbol for signal and supply(power)common for the QSFP112module.Allare common within the QSFP112 module and all voltages are referenced to this potential unless otherwise noted.Connect these directly to the host board signal-common ground plane.

Note2: Vcc Rx,Vcc1 and Vcc Tx are the receiver and transmitter power supplies and shall be applied concurrently. Requirements,defined for the host side of the Host Edge Card Connector,are listed in Table 4.Recommended host board power supply fitering is shown in Figure 4.Vcc Rx,Vecc1and Vcc Tx may be internally connected within the QSFP112 module in any combination. The connector pins are each rated for amaximum current of 1.5A(max.current of 2.0 Ais required for high module power of 15-20W).

Mechanical Dimension

Note:

- Unit: mm
- Tolerance: φ0.1mm if not shown
- · Latch color: black
- When L≤5m, the tolerance is ±50mm, when L>5m, the tolerance is ±1%

Waring:

- The transceiver optics is supplied with a dust cover. This plug protects the transceiver optics during standard manufacturing processes by preventing contamination from air borne particles. It is recommended that the dust cover remain in the transceiver whenever an optical fiber connector is not inserted.
- Handling Precautions: This device is susceptible to damage as a result of electrostatic discharge (ESD). A static free environment is highly recommended. Follow guidelines according to proper ESD procedures.
- Laser Safety: Radiation emitted by laser devices can be dangerous to human eyes. Avoid eye exposure to direct or indirect radiation.

Test Center

1. Performance Testing

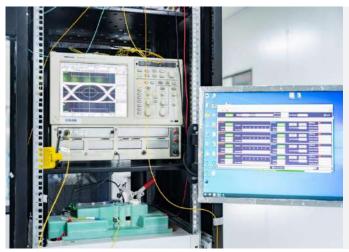

Every fiber optic transceiver is thoroughly tested by the LSOLINK Assurance Program, which is equipped with the world's most advanced analytical equipment to ensure that our transceivers meet the industry's international public protocol standards while still functioning flawlessly in your facility.

Optical Spectrum Inspection

Using the industry's leading optical spectrum analyser to check in real time that the parameters of the optical transceiver's laser comply with industry standards.

- Peak: Peak wavelength and peak level
- > 2nd Peak: Side-mode wavelength and level
- > Mean WI: Center wavelength
- Total Power: Total power of spectrum
- SMSR: Side-Mode Suppression Ratio

Optical Signal Quality Inspection

Using highly efficient sampling oscilloscopes and BERT testers, equipped with an automated test platform to accurately test the signal quality of the transceiver, test records are kept for up to 5 years to ensure the traceability of each transceiver.

- Eye Mask Margin(NRZ)
- > TDECQ(PAM4):transmitter dispersion eye closure
- > OMA: Optical modulation amplitude
- **BER:** Bit error rate
- ER: Extinction Ratio

Flow Pressure Test

Using multi-protocol network traffic analyser with various brands of switches to test the transceiver's ability to transmit at full speed.

- **Bandwidth:** Actual transceiver bandwidth on the port
- Packet Loss
- ➤ Packet Errors:CRC Errors/PCS Errors/Symbol Errors
- LinkDown Counts
- > latency

Aboveis part of our test bed network equipment. For more information, Please click <u>download</u> for optical transceiver performance test report.

2. Quality Control

We adopt advanced quality management solutions. Each transceiver is self-inspected, including:20x microscope inspection, 200x microscope inspection, and QC process inspection.
