

Features

- Hot Pluggable SFP form factor
- Up to 622Mb/s Data
- Single +3.3V power supply
- Duplex LC connector
- Max power dissipation <1.0W
- Up to 500m on 50/125µm MMF
- 850nm VCSEL Laser Transmitter
- PIN receivers
- Built-in digital diagnostic function
- Commercial temperature range 0°C to 70°C

Compliance

- SFP MSA
- Compliant to SFP+ Electrical MSA SFF-8431
- Compliant to SFP+ Mechanical MSA SFF-8432
- SFF-8472
- IEEE 802.3ae
- RoHS

Applications

- Other Optical Links
- Switch to Switch Interface
- Fast Ethernet
- Switched Backplane Applications
- Router/Server Interface

Description

The OC12-SFP-SX Transceiver is a high-performance, compact optical module designed for short-range communication applications. Fully compliant with the Small Form Factor Pluggable Multi-Sourcing Agreement (MSA), it features a Duplex LC interface and supports data transmission over multi-mode fiber. This module is engineered to deliver reliable and efficient performance in high-speed network environments.

The OC12-SFP-SX integrates key components, including an FP laser, PIN photo-detector, LD driver, limiting amplifier, and a digital diagnostic monitor. It supports data links of up to 550 meters over 50/125µm multi-mode fiber, making it ideal for OC-12/STM-4 applications. Its advanced design ensures seamless signal transmission and robust performance in enterprise and data center environments.

The module offers comprehensive control and monitoring features, including Tx Disable via TTL logic or I2C interface, Tx Fault indication for laser degradation, and Loss of Signal (LOS) output for detecting input signal loss or link status. Real-time monitoring of LOS, Disable, and Fault status is accessible through I2C register access, providing enhanced diagnostics and network management capabilities. This makes the OC12-SFP-SX a versatile and reliable solution for short-reach, high-speed communication networks.

Note1: The module signal ground pins, VeeR and VeeT, shall be isolated from the module case.

Note2: This pin is an open collector/drain output pin and shall be pulled up with $4.7k\Omega-10k\Omega$ to Host_Vcc on the host board. Pull ups can be connected to multiple power supplies, however the host board design shall ensure that no module pin has voltage exceeding module VccT/R + 0.5V.

Note3: This pin is an open collector/drain input pin and shall be pulled up with $4.7k\Omega-10k\Omega$ to VccT in the module.

Note4: See SFF-8431 4.2 2-wire Electrical Specifications.

Note5: This pin shall be pulled up with $4.7k\Omega-10k\Omega$ to Host_Vcc on the host board.

Note6: Connect with $30k\Omega$ load pulled down to GND in the module.

Test Center

1. Performance Testing

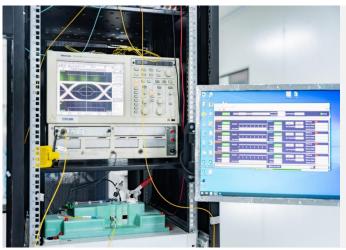

Every fiber optic transceiver is thoroughly tested by the LSOLINK Assurance Program, which is equipped with the world's most advanced analytical equipment to ensure that our transceivers meet the industry's international public protocol standards while still functioning flawlessly in your facility.

Optical Spectrum Inspection

Using the industry's leading optical spectrum analyser to check in real time that the parameters of the optical transceiver's laser comply with industry standards.

- Peak: Peak wavelength and peak level
- > 2nd Peak: Side-mode wavelength and level
- > Mean WI: Center wavelength
- Total Power: Total power of spectrum
- SMSR: Side-Mode Suppression Ratio

Optical Signal Quality Inspection

Using highly efficient sampling oscilloscopes and BERT testers, equipped with an automated test platform to accurately test the signal quality of the transceiver, test records are kept for up to 5 years to ensure the traceability of each transceiver.

- Eye Mask Margin(NRZ)
- > TDECQ(PAM4):transmitter dispersion eye closure
- > OMA: Optical modulation amplitude
- **BER:** Bit error rate
- ER: Extinction Ratio

Flow Pressure Test

Using multi-protocol network traffic analyser with various brands of switches to test the transceiver's ability to transmit at full speed.

- **Bandwidth:** Actual transceiver bandwidth on the port
- Packet Loss
- Packet Errors:CRC Errors/PCS Errors/Symbol Errors
- LinkDown Counts
- > latency

2. Quality Control

We adopt advanced quality management solutions. Each transceiver is self-inspected, including:20x microscope inspection, 200x microscope inspection, and QC process inspection.
