

Features

- Hot Pluggable SFP form factor
- Up to 622M b/s Data
- Single +3.3V power supply
- Duplex LC connector
- Max power dissipation <1.0W
- Up to 80km on 9/125µm SMF
- 1550nm DFB Laser Transmitter
- PIN receivers
- Built-in digital diagnostic function
- Commercial temperature range 0°C to 70°C

Compliance

- SFP MSA
- Compliant to SFP+ Electrical MSA SFF-8431
- Compliant to SFP+ Mechanical MSA SFF-8432
- SFF-8472
- IEEE 802.3ae
- RoHS

Applications

- Other Optical Links
- Switch to Switch Interface
- Fast Ethernet
- Switched Backplane Applications
- Router/Server Interface

Description

The OC12-SFP-ZX is a high-performance 622Mbps Small Form Factor Pluggable (SFP) transceiver designed for long-distance communication up to 80 kilometers over 9/125µm single-mode fiber. Fully compliant with the Small Form Factor Pluggable Multi-Sourcing Agreement (MSA), this module integrates advanced components, including a DFB laser, PIN photo-detector, LD driver, limiting amplifier, and a digital diagnostic monitor, ensuring reliable and efficient operation in SONET/SDH networks.

The OC12-SFP-ZX offers robust control and monitoring capabilities. The optical output can be disabled via a TTL logic high-level input on Tx Disable or through I2C interface control. It provides Tx Fault indication to alert users of laser degradation and Loss of Signal (LOS) output to detect the absence of an input optical signal or link status with a partner. These features ensure enhanced system diagnostics and network reliability.

Equipped with Digital Diagnostic Monitoring (DDM) via I2C, the OC12-SFP-ZX allows real-time access to critical parameters such as LOS (or Link), Disable, and Fault status. This transceiver is ideal for OC-12/STM-4 applications, delivering high-speed, long-haul connectivity with exceptional signal integrity. Its compact design and advanced functionality make it a versatile solution for telecommunications and enterprise networks requiring extended reach and precise performance monitoring.

Product performance Specifications

1. Basic Product Characteristics

Parameter	Symbol	Min	Тур.	Max	Unit	Note
Storage Temperature	Ts	-40	-	+85	°C	
Supply Voltage	Vcc	-0.3	-	3.6	V	
Relative Humidity	RH	5	-	95	%	
Operating Case Temperature	Tc	0	-	70	°C	
Power Supply Voltage	Vcc	3.0	3.30	3.465	V	
Damage Threshold	THd	5			dBm	
Data Rate		-	622		Mb/s	
Control Input Voltage High		2		VCC	V	
Control Input Voltage Low		0		0.8	V	
Link Distance (SMF)	D			80	km	9/125um
Power Consumption	Р			1.0	W	
Supply Current	Icc			280	mA	

2. Product Optical and Electrical Characteristics

Parameter	Symbol	Min	Тур.	Max	Unit	Note
		Transmitter				
Differential Input Impedance	Rin	90	100	110	Ohm	
Differential Input Voltage Swing	VinPP	200		2400	mVp-p

Pin-out Definition

Figure3:Pin view

Pin Function Definitions

Pin	Logic	Symbol	Description	Note
1		VeeT	Module Transmitter Ground	1
2	LVTTL-O	TX_Fault	Module Transmitter Fault	2
3	LVTTL-I	TX_Disable	Transmitter Disable; Turns off transmitter laser output	3
4	LVTTL-I/O	SDA	2-wire Serial Interface Data Line (Same as MOD-DEF2 as defined in the INF-8074i)	4
5	LVTTL-I/O	SCL	2-wire Serial Interface Clock (Same as MOD-DEF1 as defined in the INF-8074i)	4
6		MOD_ABS	Module Absent, connected to VeeT or VeeR in the module	5
7	LVTTL-I	RS0	Adaptive multi-rate operation	6
8	LVTTL-O	RX_LOS	Receiver Loss of Signal Indication (In FC designated as RX_LOS, in SONET designated as LOS, and in Ethernet designated at Signal Detect)	2
9	LVTTL-I	RS1	Adaptive multi-rate operation	6
10		VeeR	Module Receiver Ground	1
11		VeeR	Module Receiver Ground	1
12	CML-O	RD-	Receiver Inverted Data Output	
13	CML-O	RD+	Receiver Non-Inverted Data Output	
14		VeeR	Module Receiver Ground	1
15		VccR	Module Receiver 3.3 V Supply	
16		VccT	Module Transmitter 3.3 V Supply	
17		VeeT	Module Transmitter Ground	1
18	CML-I	TD+	Transmitter Non-Inverted Data Input	
19	CML-I	TD-	Transmitter Inverted Data Input	
20		VeeT	Module Transmitter Ground	1

Note1: The module signal ground pins, VeeR and VeeT, shall be isolated from the module case.

Note2: This pin is an open collector/drain output pin and shall be pulled up with $4.7k\Omega-10k\Omega$ to Host_Vcc on the host board. Pull ups can be connected to multiple power supplies, however the host board design shall ensure that no module pin has voltage exceeding module VccT/R + 0.5V.

Note3: This pin is an open collector/drain input pin and shall be pulled up with $4.7k\Omega-10k\Omega$ to VccT in the module.

Note4: See SFF-8431 4.2 2-wire Electrical Specifications.

Note5: This pin shall be pulled up with $4.7k\Omega-10k\Omega$ to Host_Vcc on the host board.

Note6: Connect with $30k\Omega$ load pulled down to GND in the module.

Test Center

1. Performance Testing

Every fiber optic transceiver is thoroughly tested by the LSOLINK Assurance Program, which is equipped with the world's most advanced analytical equipment to ensure that our transceivers meet the industry's international public protocol standards while still functioning flawlessly in your facility.

Optical Spectrum Inspection

Using the industry's leading optical spectrum analyser to check in real time that the parameters of the optical transceiver's laser comply with industry standards.

- Peak: Peak wavelength and peak level
- > 2nd Peak: Side-mode wavelength and level
- > Mean WI: Center wavelength
- Total Power: Total power of spectrum
- SMSR: Side-Mode Suppression Ratio

Optical Signal Quality Inspection

Using highly efficient sampling oscilloscopes and BERT testers, equipped with an automated test platform to accurately test the signal quality of the transceiver, test records are kept for up to 5 years to ensure the traceability of each transceiver.

- Eye Mask Margin(NRZ)
- > TDECQ(PAM4):transmitter dispersion eye closure
- > OMA: Optical modulation amplitude
- **BER:** Bit error rate
- ➤ ER: Extinction Ratio

Flow Pressure Test

Using multi-protocol network traffic analyser with various brands of switches to test the transceiver's ability to transmit at full speed.

- **Bandwidth:** Actual transceiver bandwidth on the port
- Packet Loss
- ➤ Packet Errors:CRC Errors/PCS Errors/Symbol Errors
- LinkDown Counts
- > latency

Aboveis part of our test bed network equipment. For more information, Please click <u>download</u> for optical transceiver performance test report.

2. Quality Control

We adopt advanced quality management solutions. Each transceiver is self-inspected, including:20x microscope inspection, 200x microscope inspection, and QC process inspection.

visual inspection

Microscopic inspection: 20X

Microscopic inspection: 200X

Reliability Verification

Optical endface inspection

OQC Inspection
