### Description

The OC3-SFP-EX Transceiver is a high-performance, cost-effective optical module designed for long-range communication applications. It features a Duplex LC optics interface and supports standard AC-coupled CML for high-speed signal transmission, along with LVTTL control and monitor signals. This module is engineered to deliver reliable and efficient performance in SONET/SDH network environments.

The OC3-SFP-EX incorporates a PIN receiver in its receiver section and a 1550 nm DFB laser in its transmitter section. With a link budget of up to 20dB, it is optimized for SONET OC-3/SDH STM-1 applications, ensuring seamless data transmission over distances of up to 40 kilometers. Its robust design and high-quality components make it ideal for high-speed, long-reach communication networks.

This transceiver module is specifically designed for OC-3/STM-1 networks, providing a reliable solution for telecommunications and enterprise environments requiring high-speed connectivity over single-mode fiber. Its combination of performance, cost-effectiveness, and extended reach makes the OC3-SFP-EX a versatile choice for applications demanding high data integrity and long-distance network connectivity.

## **Test Center**

#### 1. Performance Testing

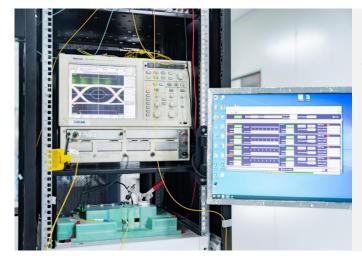

Every fiber optic transceiver is thoroughly tested by the LSOLINK Assurance Program, which is equipped with the world's most advanced analytical equipment to ensure that our transceivers meet the industry's international public protocol standards while still functioning flawlessly in your facility.

#### **Optical Spectrum Inspection**

Using the industry's leading optical spectrum analyser to check in real time that the parameters of the optical transceiver's laser comply with industry standards.

- > Peak: Peak wavelength and peak level
- > 2nd Peak: Side-mode wavelength and level
- Mean WI: Center wavelength
- Total Power: Total power of spectrum
- SMSR: Side-Mode Suppression Ratio

#### **Optical Signal Quality Inspection**

Using highly efficient sampling oscilloscopes and BERT testers, equipped with an automated test platform to accurately test the signal quality of the transceiver, test records are kept for up to 5 years to ensure the traceability of each transceiver.

- Eye Mask Margin(NRZ)
- > TDECQ(PAM4):transmitter dispersion eye closure
- > OMA: Optical modulation amplitude
- BER: Bit error rate
- ER: Extinction Ratio

#### Flow Pressure Test

Using multi-protocol network traffic analyser with various brands of switches to test the transceiver's ability to transmit at full speed.

- **Bandwidth:** Actual transceiver bandwidth on the port
- Packet Loss
- Packet Errors:CRC Errors/PCS Errors/Symbol Errors
- LinkDown Counts
- > latency
